

Disaster Recovery and Security

Distribution Management has made major investments in Disaster Recovery, Security and Business Continuity systems to ensure little or no disruption to your business. Our comprehensive plans address hardware, software, data and staffing. In short, we've built a highly-sophisticated and dependable safety net. You can trust Distribution Management with your business.

DISASTER RECOVERY:

Distribution Management uses a variety of mainstream, robust technologies to protect our company and our customers business from security risks and major disasters. Our technology includes, but is not limited to:

- Geographically dispersed data centers
- Geographically dispersed distribution centers
- Secondary power sources
- Redundant connectivity carriers to HQ and Distribution Centers
- Equipment redundancy within data centers
- Equipment redundancy at remote location
- Extensive monitoring of critical systems
- Software and systems designed to scale

SECURITY:

Distribution Management takes security seriously. Our technology includes, but is not limited to:

- Redundant firewalls maintained with current versions of software
- Intrusion Prevention System to deter unauthorized access
- Connections to distribution centers are done through Private MPLS connections
- SSL technology in use on our websites to secure each client's login and password and to protect against unauthorized access
- Only company-owned devices that meet our EndPoint Security policy are allowed to connect to our corporate network
